

COVID-19 in Camden

Last week (29 November – 5 December)

Deaths 0

New cases per day average 164

Number of daily cases in Camden, 08 March 2020 to 5 December 2021

It is important to note that as mass testing wasn't available until 28th May 2020, many cases early on will not have been tested. Therefore, current number of cases cannot be compared to the start of the pandemic.

Camden has had a total of **30,180** confirmed cases.

Weekly incidence rate = 412 per 100,000

■ This is lower than London's rate at 475 per 100,000 and is the 9th lowest amongst the 32 London boroughs. This is higher than last week (282) and is rated maroon.

6.7% of tests are positive

● For every 1,000 tests taken 67 on average are coming back positive. A weekly percentage of 6.7% is rated amber.

These indicators are RAG (red-amber-green) rated to indicate whether they are good or bad.

Green ▲ Amber ● Red ▼
 Dark red ◆ Maroon ■

London's R number = 1.0-1.2

An R number between 1.0 and 1.2 means that on average every 10 people infected will infect between 10 and 12 other people. If the R value is above 1 the pandemic is growing, if it is below 1 the pandemic is shrinking.
